DETAILED ACTION

1. Claims **1-10 (old)** and **24-54 (new)** are present for examination.

Claims **1-10 and 24-54** are found allowable over the prior arts of record and field of search for the reasons as stated below:

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The prior arts fail to teach or fairly suggest a memory cell, with at least two detectable states, which includes a first branch in series between first and second terminals of an applied read voltage, and such first branch also comprises of *a pre-read stage with two switchable resistors having different values of a predetermined first difference*, and such first branch further comprises of *a programming stage (in series with such pre-read stage) that includes a polysilicon resistor coupled to a programming circuit that is capable of programming such polysilicon programming resistor with a change in resistance value.*

The main advantage of this invention over prior art teaching is that an unprogrammed state (after manufacturing) of the memory cell can be made out from two programmed states and, more generally, such cell which has been programmed to any state after its manufacturing can be made out (through controlled switching).
